- Anger elicits less cooperative responses from East Asian than European American/Israeli counterparts (Adam et al., 2010; Kopelman & Rosette, 2008, Liu, 2009)
- Pride elicits less cooperative, but shame elicits more cooperative responses (Fulmer et al., in progress)

- Anger elicits more cooperative responses when expressed by East Asian than European American and Hispanic counterparts (Adam & Shirako, 2013)
- Driven by stereotypes about the emotional expressivity of East Asians vs. European Americans and Hispanics

Question 3

What interesting questions do you think we need to ask about culture and your research area?

Emotion
(Anger, happiness,
sadness, etc.)

**Cultural background
of perceiver**
(European American,
East Asian, Hispanic,
etc.)

Cultural
background
of expresser

- Reconsider the role of being “emotionally neutral” as a control condition
- Misinterpretation of being “emotionally neutral” is likely exacerbated in cross-cultural negotiations

Danke Schoen!
