

Syllabus
Political Economy II: Conflict and Cooperation (MECS 540-2)

Sandeep Baliga baliga@kellogg.northwestern.edu

November, 2021

(SUBJECT TO CHANGE)

Time and Location: Kellogg Global Hub Room 4130, Fri 2-5 pm. Remote option will be offered but I prefer in person attendance. I will teach in person.

Prerequisites: Economics Core Microeconomics sequence 410.1-410.3 or Permission of Instructor

Useful background reading:

1. Robert Gibbons, *Game Theory for Applied Economists*, Princeton University Press, 1992. [Advanced Undergraduate]
2. Andreu Mas-Colell, Michael Whinston, and Jerry Green, *Microeconomic Theory*, Oxford University Press, 1995. [PhD Core; Chapters 7-9, 11-14 and 23]
3. Drew Fudenberg and Jean Tirole, *Game Theory*, MIT Press, 1991. [Advanced; Chapter 10]
4. Abhinav Muthoo (1999): *Bargaining Theory with Applications*, Cambridge University Press.
5. Joseph Nye (2007): *Understanding International Conflict (6th Edition)*. Longman Classics in Political Science. Longman: New York City [Undergraduate introduction to conflict studies]

Description of the Course

This course will offer a theoretical treatment of conflict. Strategic interaction within and across nations involves conflict and cooperation. Disagreement between a country's population and its leadership can cause internal conflict, oppression and terrorism. Disagreement between countries can lead to war, costly arms races and impede economic development. Conflict often arises even though there is some cooperative solution that would have satisfied all the relevant actors. We will study the fundamental causes of conflict (positive analysis) and possible solutions that create cooperation (normative analysis).

Positive analyses will focus on conflict caused by payoff uncertainty or asymmetric information, the inability to commit to honor agreements, income inequality, fractionalization of the population into distinct and antagonistic groups and extremists who attempt to manipulate conflict to achieve their ends. This part of the course will cover topics such as the reciprocal fear of surprise attack, global games, wars of attrition, bargaining and coalition-formation.

Normative analyses will focus on communication, mechanism design and institutions and their impact on cooperation. Communication of motives or confidence-building measures, such as allowing arms inspections, may diffuse tension. Or they may increase the chances of conflict by exposing motives or the strength or weakness of a country's arms capabilities. Asymmetric information may preclude implementation of cooperation even when transfers are available and it is possible to fully commit. Similarly, "moral hazard" arising from a leader's desire for political survival will affect the chances of conflict or cooperation. Different

institutions have different commitment properties. For example, democratization gives the citizens a permanent voice in collective decision-making. This influences their incentives to revolt or accept the decisions of a leader.

These issues apply equally across countries and can cause war or within a country and cause civil war. While the course is theoretical, we will offer stylized facts about war and civil war as motivation and a guide to interesting unexploited questions and puzzles. Unlike many topics in economics and political science, these issues are under-explored. We hope to generate interesting research questions.

Grading

The grade will be based on a student presentation of a paper. Presentation involves preparing slides, a coherent description of the paper's motivation, intuition for the results and a discussion of open questions and any limitations of the analysis. Papers can be picked from * papers below, related research that is work in progress or any others papers of interest after discussion with the instructor.

1. Hobbesian Models

Thomas Hobbes (1651): *Leviathan, or the Matter, Forme, and Power of a Commonwealth, Ecclesiasticall and Civil*, http://www.earlymoderntexts.com/f_hobbes.html [Focus on Chapters 13, 14, 15, 17-24, 26, 29, (they are short)]

*Nicolas Berman, Mathieu Couttenier, Dominic Rohner and Mathias Thoenig: “This mine is mine! How minerals fuel conflicts in Africa,” *American Economic Review*, 2017, 107: 1564-1610.

Dagobert Brito and Michael Intriligator (1985): “Conflict, War and Redistribution”, *American Political Science Review*, 79:943-957.

Ron Gurantz and Alex Hirsh: “Fear, Appeasement, and the Effectiveness of Deterrence,” forthcoming at the *Journal of Politics*.
